

Liontrust Asset Management PLC

Executive Remuneration Review, FY2017–FY2026 · LIO LN · Restated on audited primary source · Year-by-year analysis and UK asset management benchmarking · 31 August 2026

Headline findings

Metric	Position
CEO single figure, FY2026	£667k — of which £nil variable
CEO single figure, FY2021 (peak)	£6,648k — bonus and LTIP both at 100% of maximum
Change, FY2021 to FY2026	-90.0%
Ten-year cumulative CEO pay (FY2017–FY2026)	£30.58m
FY2026 executive bonus outcome	Nil for both directors — scorecard scored 13.9%, then a new share price underpin zeroed it
FY2026 LTIP vesting	Nil — the FY2023 award lapsed in full (EPS -19% vs 8.5% entry; TSR bottom quartile)
Base salary	£583,600 (CEO) / £445,600 (CFO) — frozen for a third consecutive year
Governing policy	2024 DRP, approved Sept 2024 with 86.46% support, effective 1 April 2025
Most recent remuneration vote	72.57% in favour (27.43% against), 18 Sep 2025 — on ~32% turnout
CEO pay ratio (median)	5x, down from 13x in FY2023
CEO shareholding vs 5x-salary requirement	450% — below guideline. CFO at 598% is compliant
Executive options outstanding after the Aug-2026 grant	~2.26m ~ 3.6% of issued capital

The verdict, restated on audited data. Our 30 August draft understated how far this has already been fixed. Liontrust's executives were paid **nothing variable at all** in FY2026: no bonus, no LTIP vesting, and a third consecutive salary freeze. CEO pay is down 90% from its 2021 peak; the FY2023 LTIP lapsed in full; and a **share price underpin introduced this year overrode a 13.9% scorecard outcome and set the bonus to zero**. The Committee has also just rebuilt the FY2027 scorecard to cut Adjusted PBT from 55% to 20% and raise net flows and investment performance to 30% each — precisely the "stop paying for market beta" reform an activist would demand. **On implementation, this is now among the more disciplined remuneration committees in UK asset management.** Three things still deserve challenge, and one of them is new and serious: the **absolute TSR hurdle of 10%–15% over three years** (a maximum payout for ~4.8% a year), the **structural ratchet in share counts** created by granting percentage-of-salary awards at trough prices, and a **policy ceiling of 800% of salary** the Committee has declined to cap.

1 · Basis of preparation, and corrections to our 30 August draft

This report is now built on primary source. It restates our 30 August 2026 draft using the audited Directors' Remuneration Report in Liontrust's Annual Report and Financial Statements 2026 (pages 107–134), signed by Miriam Greenwood OBE DL, Chair of the Remuneration Committee, on 23 June 2026. Sections marked "(audited information)" in that report are audited by the Group's external auditor. Where we previously relied on secondary sources and analytics, several figures were materially wrong. We set them out in full below rather than quietly restating them.

1.1 What we got wrong

Item	Our 30 Aug draft	Audited actual	Materiality
CEO single figure FY2026	~£1.03m	£667k	Major. The £1.03m figure was FY2025, not FY2026
CEO single figure FY2024	~£1.0m	£1,367k	Major — understated by 37%
CEO single figure FY2023	~£2.0m	£1,933k	Minor
CEO single figure FY2021	"£6.2m or £6.6m"	£6,648k	Resolved — the £6.2m figure was wrong
CFO single figure FY2026	not obtainable	£511k	Now disclosed
Governing policy	"the 2022 policy remains in force"	2024 DRP, approved with 86.46% support, effective 1 Apr 2025	Major. A new policy was approved and we missed it
LTIP structure pre-2025	implied percentage-of-salary throughout	Fixed number of shares with uncapped value at grant until the 2024 DRP	Major — reverses part of our criticism
10% vesting threshold	"soft, against a 20–25% UK norm"	The DRP permits up to 25%; the Committee voluntarily uses 10%	We had this backwards. A lower threshold payout is <i>more</i> demanding
2025 AGM disclosure undertaking	"has yet to be visibly delivered"	Delivered — update statement published 11 Feb 2026; LTI disclosure enhanced; bonus scorecard rebuilt	Correction
Board composition	Miriam Greenwood omitted	Remuneration Committee Chair since Nov 2023	Correction — also affects our equity note
Rebecca Shelley appointment	"2019"	12 October 2021	Correction
Compensation ratio	estimated 42–48%	Total workforce remuneration -22%, exactly matching the -22% fall in gross profit	Now measured, not estimated

1.2 What we got right

Our derivations from the August 2026 LTIP grant RNS proved accurate to within rounding: we inferred a CFO salary of ~£446k (**actual £445,600**), an LTIP grant price of ~383p for the prior-year award (**actual 383.3p**), and prior-year grants of 452,962 and 247,038 shares (**actual 452,963 and 247,038**). The structural narrative — a profit-linked bonus pool replaced by a capped framework, followed by a collapse in variable pay — is confirmed in full.

A note on why this matters. Our earlier draft graded the Committee "B- and improving". On audited data that grade was too harsh, and it was too harsh in a specific direction: we understated the severity of the pay outcomes the Committee has actually imposed, and we criticised two features (the vesting threshold and the LTIP share count) without knowing the policy history behind them. The revised assessment in §12 is materially more favourable — and the criticisms that survive are correspondingly sharper.

2 · The remuneration architecture

2.1 Two policy regimes, and one structural change

	2022 DRP (to 31 Mar 2025)	2024 DRP (from 1 Apr 2025)
Approved	GM 16 Feb 2022 — 54.1% in favour	AGM 19 Sep 2024 — 86.46% in favour
Annual bonus maximum	CEO 450% / CFO 350% of salary	Unchanged — CEO 450% / CFO 350%
LTIP structure	Fixed number of shares — uncapped value at grant	Percentage of salary — CEO max 350%, CFO max 250%
Pension	Workforce-aligned	12.5% , identical to the majority of the workforce
Shareholding requirement	—	500% of salary , plus a two-year post-employment requirement
Bonus deferral	Minimum 50%	Minimum 50%, into Liontrust shares or fund units
Malus / clawback	—	Malus from grant to vesting; clawback for two years post-vesting ; applies to bonus and LTIP
Financial weighting in bonus	—	At least 80% must be financial
Entry-level bonus payout	—	Up to 25% of maximum, at Committee discretion

The single material change between the two policies was the LTIP. The Committee's own description is precise: the award moved "from an award based on a fixed number of shares with an uncapped value at grant to a more traditional percentage of salary grant."

Why this matters more than it looks. Under the old structure the CEO received **153,130 shares every year regardless of price**. As the shares fell, the value of each grant fell with them: £1,439k at 940p (2022), £1,152k at 752.5p (2023), £1,112k at 726p (2024). That was punitive in a downturn and, as the Committee concedes, uncapped in an upswing. The 2024 DRP replaced it with a conventional percentage-of-salary award — **which is what shareholders and proxy advisers asked for, and which passed with 86.46% support**. But at a depressed share price the same policy produces the opposite arithmetic: holding value constant requires far more shares. The FY2026 grant was **452,963 shares — a 196% increase in share count on the prior year** for a *higher* value of £1,736k. Neither structure is right. This is the central unresolved design problem in the policy, and §6.3 quantifies it.

2.2 The current elements of reward

Element	CEO	CFO	Notes
Base salary	£583,600	£445,600	Frozen for FY2027. Future rises capped at the wider workforce average
Pension / cash in lieu	12.5%	12.5%	Identical to the majority of the workforce — fully compliant with best practice
Benefits	Private medical, life, disability, travel insurance, EAP	Same	£6k and £5k respectively in FY2026
Annual bonus maximum	450% of salary	350% of salary	80%+ financial; balanced scorecard; share price underpin
Bonus deferral	Minimum 50%; 100% applied in FY2026	Same	Into shares, or fund units once the shareholding requirement is met
LTIP maximum	350% of salary	250% of salary	Nil-cost options; 3-year performance; 2-year post-vest holding period
LTIP threshold vesting	10% (policy permits up to 25%)	Same	Voluntarily set below the policy ceiling
Total variable maximum	800% of salary (~£4.67m)	600% (~£2.67m)	The Committee considered and rejected an overall cap on total remuneration
Shareholding requirement	500% of salary , 2 years post-employment	Same	CEO currently below at 450%; CFO compliant at 598%
All-employee plans	SIP (£1,800 matched 2:1), SAYE (£500/month, up to 20% discount), CSOP	Same	Satisfied by market-purchased shares — no dilution

3 · Ten years of CEO remuneration (audited)

3.1 The single figure and what actually paid out

Year to 31 Mar	CEO single figure (£'000)	Bonus scorecard (% of max)	LTIP vesting (% of max)	Commentary
2017	1,751	100.0%	Nil	
2018	2,191	100.0%	Nil	
2019	4,419	100.0%	100.0%	Both at maximum
2020	4,555	100.0%	100.0%	Both at maximum
2021	6,648	100.0%	100.0%	Peak. Fifth consecutive year of a full bonus
2022	6,014	74.0%	99.0%	AuMA peaks at £33.5bn; share price peaks at 2,560p in Sep-21
2023	1,933	25.0%	58.0%	Policy reset takes effect; -68%
2024	1,367	20.0%	37.3%	-29%
2025	1,031	12.9%	6.2%	-25%
2026	667	0.0%	0.0%	-35%. Nothing variable paid at all
Cumulative	£30,576k			

Read the two right-hand columns. From FY2017 to FY2021 the annual bonus paid out at **100% of maximum in five consecutive years**, and the LTIP at 100% in three. That is not a performance-linked outcome; it is a formula that could not fail, because the bonus was funded as a direct share of Adjusted Profit Before Tax and profit tracked markets. From FY2022 the same two columns fall to 74/99, 25/58, 20/37, 13/6 and finally **0/0**. The remuneration framework and the shareholder experience are now, at last, moving together.

3.2 FY2026 and FY2025 in full (audited)

£'000	John Ions FY2026	John Ions FY2025	Vinay Abrol FY2026	Vinay Abrol FY2025
Base salary / fixed allocation	584	584	445	445
Benefits in kind — private medical	6	5	5	5
Cash in lieu of pension	73	69	57	53
Total fixed pay	663	658	507	503
Cash bonus / variable allocation	—	—	—	—
DBVAP (deferred bonus)	—	339	—	201
Total annual bonus	—	339	—	201
Sub-total	663	997	507	704
LTIP — base value of vested awards	—	54	—	35
LTIP — share price depreciation and dividend equivalents	—	(24)	—	(16)
Total LTIP vesting	—	30	—	19
SIP matching shares	4	4	4	4
TOTAL REMUNERATION	667	1,031	511	727
<i>of which variable</i>	nil	<i>369 (35.8%)</i>	nil	<i>220 (30.3%)</i>

Two details worth noting. First, the FY2025 LTIP line is instructive: a base value of £54k was reduced to £30k by a **negative share price depreciation adjustment of £24k** — the plan mechanically claws back for a falling share price. Second, FY2026 total remuneration for both executives combined was **£1,178k**, against a policy maximum for the two of roughly **£8.4m**. They were paid approximately **14% of what the policy permits**.

4 · The FY2026 annual bonus: a nil outcome, and how it got there

4.1 The scorecard (audited)

Metric	Weight	Threshold	Target	Max	Actual	Weighted result
Financial — 80%						
Adjusted PBT (incl. performance fees)	55.0%	85.0%	100.0%	107.5%	84.0%	0.0%
Distribution effectiveness (net flows)	12.5%	67.0%	100.0%	116.7%	(178.9%)	0.0%
Investment performance (AuMA in 1st/2nd quartile, 1Y and 3Y)	12.5%	50.0%	67.5%	80.0%	33%	0.0%
Non-financial — 20%						
Enhance client experience and outcomes	5.0%	n/a	n/a	n/a	80%	4.0%
Diversify product range and investment offering	5.0%	n/a	n/a	n/a	67%	3.4%
Broaden distribution and client base	5.0%	n/a	n/a	n/a	50%	2.5%
Strengthen technology, data and digital capability	5.0%	n/a	n/a	n/a	80%	4.0%
Total scorecard	100%					13.9%
Share price underpin applied						to NIL

The financial half failed comprehensively. The Adjusted PBT target was set at **£37m** and the outcome was 84% of it. Net flows were **-£4,184m against a target of -£1,500m**, producing a distribution effectiveness score of **minus 178.9%**. Blended investment performance was **33% against a 50% threshold**. All three financial measures — 80% of the scorecard — scored zero.

4.2 The share price underpin: the most important governance development of the year

Following the 27.43% vote against the 2025 remuneration report, the Committee consulted shareholders, published an update statement on **11 February 2026**, and introduced a **share price underpin**:

If total shareholder return over the financial year is less than **37.1p** — 10% of the 371p share price at 31 March 2025 — the annual bonus scorecard outcome is **set to nil, regardless of the actual scorecard outcome**.

TSR for FY2026 was negative. The shares fell from **371p to 241p, a decline of 35%**. The underpin therefore overrode the 13.9% scorecard and produced a **nil bonus for both executives**.

This is the single best feature of Liontrust's remuneration framework and it deserves unambiguous credit. It is a hard, mechanical, non-discretionary link between executive variable pay and the shareholder's actual experience — precisely what the 2021–22 profit-pool structure lacked. It was introduced in direct response to shareholder feedback, and **in its first year of operation it bit**. Very few UK asset managers have anything equivalent.

Two caveats. The Committee states the underpin "will be in place for next year, **but may not be in future years**" — it is not a permanent feature of the policy and could be withdrawn without a shareholder vote. And the FY2027 hurdle resets to **24.1p**, being 10% of the *new, lower* 241p base. A falling share price mechanically lowers the bar each year. **Shareholders should press for the underpin to be made permanent and for the hurdle to be anchored, not reset annually.**

4.3 Deferral

Both executives deferred **100% of their variable remuneration** in FY2026 — against a policy minimum of 50%. The DBVAP history shows this is a genuine escalation, not a one-off:

Award in respect of	John Ions — % of bonus deferred	Value	Vinay Abrol — % deferred	Value
FY2022	69%	£1,915,000	50%	£786,000
FY2023	50%	£310,000	50%	£184,000
FY2024	50%	£263,000	50%	£156,000
FY2025	100%	£339,000	100%	£201,000
FY2026	n/a — nil bonus	£nil	n/a — nil bonus	£nil

DBVAP awards are nil-price options over Liontrust shares and/or units in Liontrust-managed funds, exercisable one third each year over three years. No further performance conditions apply, the Committee having satisfied itself on performance when determining the original bonus.

5 · The LTIP: grants, lapses, and whether the in-flight awards can pay

5.1 Grant history (audited)

Award (FY)	Granted	Shares — CEO	Share price used	Face value — CEO	Shares — CFO	Face value — CFO	Status
FY2023	23 Jun 2022	153,130	940.0p	£1,439k	112,295	£1,056k	LAPSED IN FULL, Jun 2025
FY2024	22 Jun 2023	153,130	752.5p	£1,152k	112,295	£845k	In flight — tested Jun 2026
FY2025	27 Jun 2024	153,130	726.0p	£1,112k	112,295	£815k	In flight — tests Jun 2027
FY2026	26 Jun 2025	452,963	383.3p	£1,736k	247,038	£947k	In flight — tests Jun 2028
FY2027	6 Aug 2026	566,203	~292.8p (derived)	~£1,657k (derived)	308,797	~£905k (derived)	Granted post year-end

FY2026 award: 297.5% of salary for the CEO (85% of the 350% policy maximum) and 212.5% for the CFO. FY2027 award: 284% and 203% respectively, capped by the Committee at a 25% increase in share numbers. Grant price for FY2027 derived from the disclosed share counts and percentages against audited salaries.

5.2 The FY2023 award lapsed in full — the test that mattered

Condition	Weight	Entry	Target	Stretch	Actual	Vested
Adjusted Diluted EPS	60%	8.5%	11%	16.75%	(19)%	Nil
Relative TSR vs FTSE 250	40%	Median	—	Top quintile	Bottom quartile	Nil

A £1,439k award to the CEO and £1,056k to the CFO **paid nothing**. The plan worked exactly as intended.

5.3 Can the in-flight awards pay? The FY2026 award examined

The FY2026 award (452,963 shares to the CEO, tested June 2028) carries three conditions:

Condition	Weight	Threshold (10% payout)	Maximum (100% payout)	Where the business actually is
Adjusted diluted EPS (ex-performance fees)	30%	41.9p	51.3p (target 46.6p at 50%)	FY2026 actual: 35.66p ex-performance fees. Threshold requires +17.5%; maximum requires +44%
Absolute TSR (from 26 Jun 2025)	40%	10% total	15% total	From a 383.3p grant price against ~306.5p today — currently negative
Investment performance — weighted AuMA in top two IA quartiles, 3Y and 5Y	30%	50.0%	75.0%	FY2026 blended 1Y/3Y measure was 33% — below even the bonus threshold

The finding that should concern shareholders most is the absolute TSR hurdle. A 15% total shareholder return over three years pays 100% of a 40% weighting. That is approximately **4.8% a year** — below the long-run return of the FTSE 250, below most estimates of the cost of equity, and below what an investor could have earned in gilts over much of the performance period. The relative FTSE 250 underpin lets the Committee flex the outcome by only **up to 10% of the award**, which mitigates but does not fix it.

And the hurdle resets downward with the share price. The FY2026 award measures TSR from 383.3p. The FY2027 award, granted in August 2026, measures from approximately **292.8p** — so the same 15% now requires only ~337p rather than ~441p. **Granting percentage-of-salary awards at a depressed price delivers a double benefit: more shares, and a lower absolute return hurdle on each of them.** This is the sharpest remaining criticism in this report and it is not addressed anywhere in the policy.

In fairness: measured from their actual grant prices, the FY2024 and FY2025 awards (752.5p and 726p) are deeply underwater and appear very likely to lapse, as the FY2023 award did. The EPS condition on the FY2026 award is also demanding on current trajectory. The criticism is of the hurdle *design*, not of a windfall that has been paid.

5.4 Outstanding options and dilution

At 31 March 2026	Performance-conditioned	Not performance-conditioned	Total
John Ions	759,223	93,477	852,700
Vinay Abrol	471,628	58,950	530,578
Combined	1,230,851	152,427	1,383,278
<i>Plus the FY2027 grant (6 Aug 2026)</i>	<i>875,000</i>	—	<i>875,000</i>
Combined, post-August 2026	2,105,851	152,427	~2,258,278
As % of ~62.97m shares in issue	3.34%	0.24%	~3.59%

Context that our earlier draft lacked. The Company operates a formal policy that **dilution from employee share awards will not exceed 10% in any rolling ten-year period**, uses an employee benefit trust to manage it, and satisfies SIP and CSOP awards with **market-purchased shares**, which carry no dilutive effect. The 3.6% figure therefore sits inside a disclosed and monitored cap.

The point that survives. The FY2026 and FY2027 LTIP grants together total **1,575,001 shares — 2.50% of issued capital**. The £10m buyback completed in June 2026 retired 3,764,532 shares. **Two years of executive LTIP grants equal roughly 42% of the entire buyback programme**. Returning capital through buybacks while issuing equity to executives at trough prices is a real economic tension, whether or not it breaches a dilution cap.

6 · Pay for performance

6.1 Executives, workforce and shareholders compared

Percentage change vs prior year	FY2022	FY2023	FY2024	FY2025	FY2026
CEO salary	0%	+58%	+6%	0%	0%
CEO bonus	0%	-78%	-15%	-36%	-100%
CFO salary	0%	+28%	+6%	0%	0%
CFO bonus	0%	-77%	-15%	-36%	-100%
Staff salary (average)	+12%	+11%	+6%	+5%	+4%
Staff bonus (average)	+103%	-38%	-7%	-21%	-24%

The FY2026 column is the answer to the question shareholders have been asking for four years. Executive bonuses fell 100%. Staff bonuses fell 24%. Executive salaries were frozen; staff salaries rose 4%. The Committee differentiated **against** the executives, decisively. That is the opposite of the 2021–22 pattern and it should be recognised as such.

6.2 Relative importance of spend on pay, FY2025 to FY2026 (audited)

Measure	Change
Adjusted profit before tax, excluding performance fee profit	-38%
Adjusted profit before tax	-37%
Total member and employee remuneration	-22%
Dividend spend	-75%

Two readings, both fair. Total workforce remuneration fell 22% — exactly matching the 22% fall in gross profit, so the **compensation-to-gross-profit ratio was held flat**, which is competent cost management. But shareholders absorbed a 75% cut in distributions while the workforce absorbed 22%. Pay fell less than profit. That is normal in asset management, where people are the product, but it is the number an activist will cite, and the Committee should be ready to defend it.

6.3 The CEO pay ratio (voluntary disclosure)

Liontrust's UK headcount is below the 250-employee threshold, so the CEO pay ratio requirement **does not apply**. The Company discloses it anyway, using Option A — full individual pay data for all UK staff. That is a credit to the Committee.

	FY2023	FY2024	FY2025	FY2026
Lower quartile ratio	21x	15x	12x	8x
Median ratio	13x	10x	9x	5x
Upper quartile ratio	7x	5x	5x	3x

FY2026 reference data	Lower quartile	Median	Upper quartile
Workforce single figure	£81k	£129k	£216k
Workforce salary component	£70k	£100k	£140k
CEO single figure		£667k	

A median ratio of 5x is remarkably low for a UK listed company — FTSE 350 medians typically run 30x–60x, and UK asset managers commonly sit in the 15x–40x range. It reflects both a genuinely well-paid workforce (median single figure of £129k) and a CEO taking nothing variable.

7 · Shareholding and alignment

7.1 Against the 5x-salary requirement (audited, at 31 March 2026)

	Ordinary shares held	Unvested shares/options not subject to performance	Value	% of salary	vs 500% requirement
John Ions	1,041,256	85,013	£2,623k	450%	Below
Vinay Abrol	1,074,380	50,846	£2,659k	598%	Compliant

Three observations.

1. **The CFO holds more shares than the CEO**, both absolutely and relative to salary — an unusual and telling inversion after 16 and 30 years respectively.
2. **The CEO is below the shareholding guideline.** This is a function of a 90% fall in the share price rather than of selling, but it is a live compliance point and the Committee should state how and by when it will be remedied.
3. A **two-year post-employment shareholding requirement** applies — good practice, and directly relevant to any change-of-control scenario.

7.2 Non-executive shareholdings

Director	Ordinary shares held
Luke Savage (Chair)	15,000
Miriam Greenwood (Remuneration Committee Chair)	2,750
Rebecca Shelley (SID)	2,082
Mandy Donald (Audit & Risk Chair)	1,579

Non-executive alignment is minimal. Three of the four hold fewer than 3,000 shares — under £10,000 at the current price. The policy merely "encourages" NEDs to use a percentage of fees to buy shares. Given a board that may have to adjudicate an offer for the company, this is thin.

7.3 The post-year-end share dealing

On **29 April 2026** John Ions sold 89,849 shares and purchased 76,298; Paige Ions, a person closely associated with him, sold 215,041 and purchased 43,258; and his dependent children purchased 185,334. The Company discloses that **his net shareholding including persons closely associated with him remained unchanged**. On 5 May 2026 both executives purchased 2,043 SIP shares each.

Assessment: on the disclosed facts this is an intra-family transfer, most plausibly estate or tax planning, and is net-neutral in economic exposure. It is properly disclosed. We flag it because a 215,041-share disposal by a PCA is the kind of transaction that attracts attention out of context, and shareholders may reasonably ask the Company to confirm the rationale.

7.4 The alignment ratio versus peers

	CEO annual pay	CEO shareholding value	Pay as % of shareholding
Liontrust — John Ions	£667k	£2,623k	25.4%
Ashmore — Mark Coombs (founder)	~£229k	~£331m	0.07%

Mark Coombs owns 32.19% of Ashmore and is, economically, a pure owner: his annual pay is worth 0.07% of his stake, so essentially all of his incentive comes from the share price. John Ions' annual pay is worth **a quarter of his entire shareholding** — meaning a 25% rise in the Liontrust share price delivers him roughly what one year's pay does. **The gap has narrowed sharply from our earlier estimate of 38%, because FY2026 pay was so much lower than we assumed.** The structural point nonetheless stands: for the incumbent executives the recurring compensation stream remains a materially larger economic interest than the control premium on their equity, and that shapes the board's incentives on any approach for the company.

8 · The FY2027 framework: what the Committee has changed

8.1 The bonus scorecard has been rebuilt

Metric	FY2026 weighting	FY2027 weighting	Change
Adjusted profit before tax	55.0%	20%	-35 points
Distribution effectiveness (net flows)	12.5%	30%	+17.5 points
Investment performance	12.5%	30%	+17.5 points
<i>Financial subtotal</i>	80%	80%	<i>unchanged</i>
Strategic objectives	20% (four measures)	10%	
River Global integration	—	10%	New
Share price underpin	Introduced	Retained (TSR < 24.1p to nil)	

This is a substantive, shareholder-friendly redesign and the Committee deserves credit for it. Cutting Adjusted PBT from 55% to 20% directly addresses the criticism that has dogged Liontrust since 2021 — that executives were paid for a profit number driven by market beta, and one that excludes the amortisation and impairment of the very acquisitions they chose to make. Raising **net flows and investment performance to 30% each** ties pay to the two variables that actually determine whether this franchise recovers, and which management genuinely controls. Adding a **specific 10% weighting for River Global integration** creates accountability for the acquisition at the point of execution rather than at the point of announcement.

One residual concern: Adjusted PBT still carries 20%, and it remains an Alternative Performance Measure whose definition is set by management, subject to Audit & Risk Committee approval. In FY2024 adjusted PBT of £67.4m sat against a **statutory loss before tax of £0.6m**. Any weight on this measure should be accompanied by a statutory profit sense-check.

8.2 Fixed pay

Base salary is **frozen for a third consecutive year** at £583,600 and £445,600. The wider workforce receives 3% on average, "focused on specific cases where roles and responsibilities have changed". Non-executive fees are also frozen. Future executive salary rises are capped at the wider workforce average. Pension remains at 12.5%, identical to the majority of the workforce.

8.3 The FY2027 LTIP

At the date of the report the Committee was **still considering the appropriate level of award "to take into account the current share price"** — an explicit acknowledgement of the ratchet problem identified in §5.3. The grant, made on 6 August 2026, was **capped at a 25% increase in share numbers** and landed at 284% and 203% of salary, below the 350%/250% policy maxima. The performance conditions are absolute TSR with a relative FTSE 250 underpin (40%), adjusted diluted EPS ex-performance fees from a **starting point of 35.66p** (30%), and investment performance over three and five years (30%).

9 · Governance of the Committee

Item	Detail
Composition	Miriam Greenwood OBE DL (Chair) , Mandy Donald, Rebecca Shelley — all independent non-executive directors
Meetings	Seven during FY2026
Adviser	PricewaterhouseCoopers LLP ; fees of £106,000 on a time-and-materials basis; founding member of the Remuneration Consultants Group
Regulatory regimes	FCA MIFIDPRU , UCITS and AIFM remuneration codes
Workforce engagement	Workforce Advisory Forum ; its Chair meets the Committee Chair; Mandy Donald is the designated NED for employee engagement
Malus	From grant to vesting, on bonus and LTIP
Clawback	Two years from vesting
Dilution	Cap of 10% in any rolling ten-year period ; EBT used; SIP/CSOP satisfied by market purchases
Loss of office	No payments in FY2026 or FY2025; no payments to former directors
Service contracts	Executives: director letter dated 23 Jan 2014 (6 months' notice); LLP deed of adherence dated 8 Jul 2010 (12 months). NEDs: 3 months
Cap on total remuneration	Considered and rejected

Non-executive fees (audited, £'000)

Director	Role	FY2026	FY2025
Luke Savage	Non-executive Chair (appointed 20 Sep 2024)	210	105 (<i>part year</i>)
Mandy Donald	NED, Audit & Risk Chair	126	126
Rebecca Shelley	NED, Senior Independent Director	112	113
Miriam Greenwood	NED, Remuneration Committee Chair	104	104

FY2027 fees frozen. Base NED fee £65,000; Chair £210,000 with an aggregate cap (the Chair waives all other role fees); other NEDs capped at £150,000 aggregate. Role fees: SID £12,000; Audit & Risk chair/member £20,000/£9,000; Nomination £15,000/£5,000; Remuneration £20,000/£9,000; Sustainability £12,000/£5,000; other committees £9,000; engagement roles £5,000–£7,500.

10 · Shareholder voting record

Meeting	Resolution	Votes for	% for	Votes against	% against	Withheld
GM, 16 Feb 2022	Directors' Remuneration Policy	—	54.10%	—	45.90%	—
GM, 16 Feb 2022	Long Term Incentive Plan	—	55.60%	—	44.40%	—
AGM, 22 Sep 2022	Directors' Remuneration Report	—	53.50%	—	46.50%	—
AGM, 21 Sep 2023	Directors' Remuneration Report	Passed	n/d		n/d	
AGM, 19 Sep 2024	Directors' Remuneration Policy (2024 DRP)	24,746,170	86.46%	4,032,396	13.54%	2,416,697
AGM, 18 Sep 2025	Directors' Remuneration Report	14,619,673	72.57%	5,525,591	27.43%	1,555,403
AGM, 17 Sep 2026	Directors' Remuneration Report	Pending				

10.1 Two findings from the vote data

First, the 2024 policy vote broke the pattern. After 45.9% and 46.5% against in 2022, the new policy passed with **86.46%** support. Shareholders endorsed the reformed framework decisively. The 27.43% against the 2025 *report* was therefore a verdict on **implementation and disclosure**, not on the policy — which is exactly what the Committee's consultation identified and has now acted on.

Second — and this has not been widely noticed — turnout is remarkably low. Total votes cast at the 2025 AGM were **20,145,264**, against roughly 63.8m shares in issue: a turnout of about **32%**.

The implication for the September 2026 AGM. GAM Holding AG's special situations funds hold **3,155,000 shares**. At 2025's turnout that single holding would represent **approximately 15.7% of all votes cast** — before any coordination with other institutions. On a register where the top 20 hold only ~50% and turnout runs at a third, **a 5% holder is not a minority voice at this meeting; it is a bloc capable of pushing a remuneration resolution below 50%**. Any shareholder intending to vote should assume the outcome is genuinely contestable.

11 · Peer benchmarking

11.1 Structure

Practice	Liontrust	UK asset management norm	Verdict
Bonus funded from a profit pool	Removed in 2022	Common at partnerships; rare and poorly regarded at listed companies	Fixed
Share price underpin on the bonus	Yes — and it produced a nil outcome in FY2026	Very rare	Materially better than peers
Annual bonus maximum	450% of salary (CEO)	150–250% typical for a listed mid-cap	Outlier — top of range
LTIP maximum	350% of salary (CEO)	150–250% typical	Outlier — top of range
Total variable maximum	800% of salary ; no overall cap on total remuneration	300–500% typical	Significant outlier
Actual variable paid, FY2026	Nil	Widely still paid	Far better than peers
Bonus deferral	Minimum 50%; 100% applied	40–60% typical	Better than peers
LTIP metrics	TSR (40%), adjusted EPS (30%), investment performance (30%)	TSR and EPS standard; investment performance used by the better-governed	Better than peers
Absolute TSR hurdle	10% threshold / 15% maximum over three years	Relative TSR vs an index is standard; absolute hurdles usually far higher	Materially weaker than peers
LTIP threshold vesting	10% , though the policy permits 25%	20–25% is the UK norm	Better than peers — we corrected this
Post-vest holding	Two years	Two years is best practice	In line
Pension	12.5%, workforce-aligned	Alignment now standard	In line — fully compliant
Shareholding requirement	500% of salary , 2 years post-employment	200–300% typical	Well above peers
Malus and clawback	Malus to vesting; clawback 2 years	Standard	In line
CEO pay ratio	Disclosed voluntarily despite exemption	Often omitted when exempt	Better than peers
Combined CEO/CFO tenure	16 years and 30+ years	Unusually long	A structural governance issue

11.2 Quantum

Company	CEO	Latest total CEO pay	AUM	Market cap	Pay per £bn AUM	Pay as % of market cap	Fixed / variable mix
Liontrust	John Ions	£667k	£24.3bn	~£193m	~£27k	~0.35%	100% / 0%
Premier Miton	Mike O'Shea	~£923k	~£9.0bn	~£58m	~£103k	~1.59%	38% / 62%
Jupiter	Matthew Beesley	~£2.16m	~£68.4bn	~£0.8bn	~£32k	~0.27%	22% / 78%
Schroders	Richard Oldfield	~£1.81m	~£770bn	~£9.9bn	~£2.4k	~0.018%	21% / 79%
Aberdeen Group	Jason Windsor	~£3.19m	~£500bn+	~£3.5bn	~£6.4k	~0.09%	24% / 76%
Ashmore	Mark Coombs (founder)	~£229k	~£40bn	~£1.47bn	~£5.7k	~0.016%	44% / 56%

Liontrust figures are audited FY2026. Peer figures are indicative, drawn from public compensation disclosures and analytics as at August 2026, and should be refreshed against a live data source before use in a voting decision.

On restated data, Liontrust screens well. At £667k the CEO is paid less than Premier Miton's — a manager a third of Liontrust's size — and roughly a third of Jupiter's. Pay per £bn of AUM falls from our earlier estimate of £42k to **£27k, now below Jupiter's**. Pay as a percentage of market capitalisation falls from 0.53% to **0.35%**. And with **zero variable pay**, Liontrust's CEO has by some distance the most conservative pay mix in the peer group, against 76–79% variable at the three large listed managers.

The quantum criticism has therefore largely dissolved. What remains is a criticism of **policy ceilings and hurdle calibration**, not of what is being paid.

12 · Assessment

12.1 Green flags

1. **Nil variable pay in FY2026** — no bonus, no LTIP vesting, for either executive.
2. **The share price underpin** — a hard, mechanical link to shareholder experience that overrode a 13.9% scorecard in its first year of operation.
3. **The FY2027 scorecard redesign** — Adjusted PBT cut from 55% to 20%; net flows and investment performance raised to 30% each; a dedicated 10% weighting on River Global integration.
4. **The FY2023 LTIP lapsed in full**, and the FY2024/FY2025 awards look likely to follow.
5. **Salary frozen for a third year**, with future rises contractually capped at the workforce average.
6. **100% bonus deferral**, against a 50% policy minimum.
7. **A 500%-of-salary shareholding requirement** with a two-year post-employment tail — well above UK norms.
8. **Threshold vesting voluntarily set at 10%** against a policy permitting 25%.
9. **Pension at 12.5%, identical to the workforce**.
10. **CEO pay ratio disclosed voluntarily** despite exemption; median down from 13x to 5x.
11. **Executives differentiated against**: staff bonuses -24%, executive bonuses -100%.
12. **Genuine responsiveness to the 2025 vote** — consultation, an update statement on 11 February 2026, and concrete changes delivered.

12.2 Red flags

1. **The absolute TSR hurdle is far too low**. 15% total return over three years — roughly **4.8% a year** — pays 100% of a 40% weighting. Below the cost of equity, below the FTSE 250's long-run return, and mitigated only by a relative underpin that can flex the outcome by at most 10% of the award. **This is the most serious remaining defect**.
2. **The TSR base resets downward each year**. The FY2026 award measures from 383.3p; the FY2027 award from ~292.8p. A falling share price makes each successive hurdle easier in cash terms while simultaneously increasing the share count. **There is no disclosed windfall-adjustment mechanism**.
3. **The policy ceiling of 800% of salary** — a theoretical CEO package of ~£5.3m, about 2.7% of market capitalisation — remains in force, and the Committee **considered an overall cap on total remuneration and decided against it**.
4. **The share price underpin is not permanent**. The Committee states it "may not be in future years", and the FY2027 hurdle has already reset from 37.1p to 24.1p.
5. **The CEO is below the 500% shareholding requirement** at 450%, with no disclosed remediation timetable.
6. **Adjusted PBT remains a bonus metric at 20%** — an Alternative Performance Measure defined by management that showed £67.4m against a statutory loss of £0.6m in FY2024.
7. **The 2023 salary increases (+58% CEO, +28% CFO) are permanent** and compound through every variable maximum, which is expressed as a percentage of salary.
8. **Non-executive shareholdings are minimal** — three of four directors hold under 3,000 shares — on a board that may have to adjudicate an offer.
9. **Extreme executive tenure**: 16 years and 30+ years, with no disclosed succession planning in the remuneration context.

12.3 Revised grade

B+ on implementation; C on policy design. Our 30 August draft graded this **B-** on incomplete information; the audited record does not support that. The Committee has imposed a nil variable outcome, introduced a binding share price underpin, rebuilt the scorecard around flows and fund performance, frozen pay for three years and let a £2.5m LTIP lapse in full. **On what it has actually done, this is now among the more disciplined remuneration committees in UK listed asset management.**

The framework it operates within is another matter. An 800%-of-salary ceiling with no total cap, and a 15% three-year TSR hurdle for maximum vesting, are not consistent with the restraint the Committee is currently exercising. **The correct shareholder posture is to support the 2026 remuneration report and press hard on the TSR hurdle and the policy ceiling at the next policy renewal.**

13 · The 17 September 2026 AGM

Item	What to watch	A good outcome
Remuneration report vote	Trend: 46.5% to n/d to n/d to 27.43% against	Below 20% , clearing the Investment Association Public Register
Turnout	~32% in 2025; a 5% holder is ~16% of votes cast	Higher institutional participation
TSR hurdle	10%/15% over three years for the 40% LTIP weighting	A commitment to raise it at the next policy renewal
Share price underpin	Committee says it "may not be in future years"	Made permanent , with an anchored rather than annually resetting hurdle
Windfall provisions	Grants at 383.3p and ~292.8p into a recovering market	Explicit discretion to scale back beta-driven vesting
CEO shareholding shortfall	450% against a 500% requirement	A stated remediation timetable
Policy renewal timing	2024 DRP is in year two of three	Signalling on a reduced variable maximum for the 2027 policy
SID succession	Rebecca Shelley not standing for re-election	A successor with remuneration and sector experience
NED alignment	Three of four hold under 3,000 shares	A mandatory NED shareholding requirement

14 · Twelve questions for the Remuneration Committee Chair

Several of our earlier questions have now been answered by the audited report and are dropped. These are the ones that remain.

1. The absolute TSR condition pays **100% of a 40% weighting for a 15% total return over three years** — approximately 4.8% a year, below most estimates of the cost of equity. What is the rationale, and will the Committee raise it?
2. The TSR measurement base fell from 383.3p to approximately 292.8p between the FY2026 and FY2027 grants. What prevents a windfall from a beta-driven recovery, given that a lower base makes the same percentage hurdle easier in cash terms while the share count simultaneously rises?
3. The share price underpin produced a nil bonus in its first year and was described as something that "may not be in future years". **Will the Committee commit to making it a permanent feature of the next policy**, and to anchoring the hurdle rather than resetting it to 10% of each year's opening price?
4. The Committee considered an overall cap on total remuneration and decided against it. Given a policy ceiling of 800% of salary at a company with a £193m market capitalisation, what would change that view?
5. The CEO's shareholding is **450% of salary against a 500% requirement**. What is the remediation timetable, and does the Committee regard the shortfall as material given the two-year post-employment requirement?
6. Adjusted profit before tax retains a 20% bonus weighting. In FY2024 it showed £67.4m against a **statutory loss before tax of £0.6m**. Will the Committee introduce a statutory profit sense-check?
7. The FY2026 LTIP requires adjusted diluted EPS ex-performance fees of **41.9p at threshold against 35.66p actual**. Does the Committee regard the in-flight awards as realistically capable of vesting, and if not, what is their retention value?
8. Base salary rose 58% and 28% in 2023 and has been frozen since. Every variable maximum is expressed as a percentage of that salary. Has the Committee considered rebasing?
9. Non-executive directors hold between 1,579 and 15,000 shares. Will the Committee introduce a **mandatory** NED shareholding requirement, given the board may have to adjudicate an offer for the company?
10. On 29 April 2026 the CEO and persons closely associated with him executed offsetting transactions in over 400,000 shares, described as leaving the net holding unchanged. Will the Company confirm the rationale?
11. The FY2027 scorecard introduces a 10% weighting for River Global integration. What are the specific, measurable integration criteria, and will the outcome be disclosed against them?
12. With the CEO at 16 years and the CFO at 30+, how does the Committee weigh the retention rationale for large LTIP grants against the succession risk of extreme tenure?

15 · Conclusion

On audited data, the story of Liontrust's executive remuneration is one of a framework that failed badly and has since been comprehensively repaired.

From FY2017 to FY2021 the annual bonus paid at **100% of maximum in five consecutive years** and the LTIP at 100% in three, producing a peak CEO single figure of **£6,648k**. That was not performance-linked pay; it was a profit-share funded directly from Adjusted Profit Before Tax, and profit tracked markets. The 2022 policy reset severed the link and hard-capped the bonus. The 2024 DRP, approved with **86.46%** support, replaced an uncapped fixed-share LTIP with a conventional percentage-of-salary award.

The outcomes since have been severe and, in FY2026, absolute. CEO pay fell to **£667k**, of which **nothing** was variable. The scorecard scored 13.9% and a newly introduced **share price underpin set it to nil**. The FY2023 LTIP lapsed in full. Salary has been frozen for three years. The median CEO pay ratio has fallen from 13x to **5x**. Staff bonuses fell 24% while executive bonuses fell 100%. And the FY2027 scorecard has been rebuilt to cut Adjusted PBT from 55% to 20% and put **net flows and investment performance at 30% each**.

The honest conclusion is that we were too hard on this Committee, and for the wrong reasons. What remains is narrower but sharper. A maximum LTIP payout for **15% total shareholder return over three years** is not a stretch target — it is roughly 4.8% a year, and the measurement base resets lower with every depressed grant. A policy ceiling of **800% of salary**, with an overall cap explicitly considered and rejected, is inconsistent with the restraint the Committee is actually exercising. And a share price underpin that has just proved its worth is, on the Committee's own words, not guaranteed to survive.

Support the FY2026 remuneration report. Press the TSR hurdle, the permanence of the underpin, and the policy ceiling. On a register where turnout runs at a third and a 5% holder commands roughly a sixth of the votes cast, that pressure is more likely to succeed than at any point in the last four years.

16 · Sources

Primary. Liontrust Asset Management PLC, *Annual Report and Financial Statements 2026*, Remuneration Report, pages 107–134, signed by Miriam Greenwood OBE DL, Chair of the Remuneration Committee, 23 June 2026. Sections identified as "(audited information)" include the single total figure of remuneration, pensions, LTIP awards, historic LTIP awards, DBVAP awards, SIP shares, directors' shareholdings, shareholding requirement, compensation for loss of office and payments to former directors. Filed at Companies House under company number 02954692.

Supporting company disclosure. Director/PDMR Shareholding RNS of 6 August 2026 (FY2027 LTIP grants); the shareholder update statement of 11 February 2026; Result of AGM announcements for 22 September 2022, 21 September 2023, 19 September 2024 and 18 September 2025; the General Meeting result of 16 February 2022; and TR-1 holdings notifications of July and August 2026.

Third-party. Citywire, Portfolio Adviser, City A.M., LexisNexis Research & Legal Analysis, Investment Week, Money Marketing and Kalkine Media for the 2021–22 policy episode; and published compensation and ownership analytics for Jupiter Fund Management, Ashmore Group, Premier Miton, Schroders and Aberdeen Group.

Caveats. All Liontrust figures in sections 3 to 10 are taken directly from the audited Remuneration Report. Three items are analyst derivations, marked as such: the FY2027 LTIP grant price of ~292.8p and its implied face values, calculated from the disclosed share counts and percentages of audited salary; the ~32% AGM turnout, calculated from disclosed votes against an approximate share count; and the peer alignment ratios in §7.4 and §11.2. Peer remuneration, AUM and market capitalisation figures are indicative and drawn from secondary sources. The 2023 AGM remuneration vote percentage was not obtainable and is marked n/d. Where this report differs from our 30 August 2026 draft, the audited figure governs; §1.1 lists every correction.
