EM Portfolio Morning Brief — Friday, 30 October 2026

Coverage: full watchlist sweep; Thu 29 Oct sessions plus early Fri 30 Oct. **Data caveat:** page fetches were blocked for most outlets, so nearly all figures are search-snippet level and unverified against filings; no official settles for DXY, UST, copper, silver, Brent or EM FX. "QUIET" means *searched, nothing found*, not *verified nothing*. Conflicts are flagged inline.

1. Top of the stack

1. **Possible correction to the Brazil "crash" figures in the 26–29 Oct briefs.** Ibovespa closed **-1.06% at 169,186 on 29 Oct; USD/BRL +0.89% to R$5.387**, fiscal fear plus weak Wall Street (BP Money, DGABC). The "-13.88%" Monday Ibovespa print and "+8.21%" in earlier briefs came from Canal Rural URL slugs and look like **-1.388% / +0.821% misreads**; 176,608 → 169,186 over three sessions is ~-4%, consistent with that. By the same logic the single-source **BBAS3 -29%, B3SA3 -36% and XP -52%** figures from earlier briefs are **suspect and should be checked against B3/Nasdaq closes** before anyone acts on them. Lula was re-elected 25 Oct; finance minister not named (Alckmin and Piauí governor-elect Fonteles are cited, Band). **Copom 4 Nov** (Selic 13.75%): one source shows pause odds jumping to ~62% with cut odds ~28% (Valor Investe via Investir e Começar); no hike scenario found — this contradicts the 29 Oct brief's "hike risk" framing. Lean: pause.
2. **US macro hawkish; Alphabet's record one-day drop (-12.6%) hit tech.** Q3 GDP 3.4% annualized, Sept core PCE +0.3% m/m / 3.1% y/y; Fed held at 3.75–4.00% on 28 Oct with two officials favoring a hike, December hike "in play"; S&P 500 7,720 (-0.3%), Nasdaq ~-1.4%; 10y ~4.98%; gold ~$4,026, **silver ~$52.5 (-2.3–2.9%, YTD low)** (Kitco, Tradingkey, Ad-hoc-news). The 3.6% y/y headline PCE is single-source. Negative for EM duration/FX (EMGA, BLTN) and the silver names.
3. **Greater China tech sold off; BYD missed.** HS Tech **-2.84% to 3,744** on AI-spending doubts, HSI -0.6% to 22,958.65, HSCEI -0.46% to 7,755.66 (BBN Times); HSI reportedly jumped back through 23,000 early Friday (The Standard). **BYD Q3** net profit RMB10.02bn (+28.1%) vs consensus ~RMB11.4–12.95bn — a miss; revenue RMB221.5bn (+13.6%); exports 550,704 (+137%); inventory +60%; analyst: "coming quarters will be tougher" (Electrek, TimesLive). 9M revenue/H1 figures do not reconcile — check the filing.
4. **Korea: SK hynix blew out Q3 (reported 28 Oct):** revenue ₩104.6tn, OP ₩83.33tn (consensus ~₩77tn), ~₩100tn 2026 shareholder returns incl. ₩20tn buyback (Korea Times, investingLive). Positive read-through for **SK Inc** (Align Partners disclosed 1.5% stake, sees ~75% NAV discount, Korea Times). Samsung Electronics Q3 confirmed prelim OP ₩107.4tn; final call coverage not found. Samsung C&T Q3 OP ~₩1.14tn (+15%) (MT). BoK held 3.00% on 22 Oct, November hike expected (Khan).
5. **Copper/mining prints: mixed. Capstone** Q3: record adj. EBITDA $358.3M but adj. EPS $0.12 vs $0.131, **guidance now low end of 200–230kt Cu / high end of C1 cost**, Pinto Valley restart 2 Nov, Santo Domingo FID reportedly slipped to Q1 2027 (Stockhouse). **Teck** Q3 profit $1.6bn, QB 47.2kt, guide unchanged; **only China SAMR approval outstanding for Anglo–Teck** (SAMR reportedly seeking copper-concentrate supply commitments; target close by Mar 2027) (GlobeNewswire, BNN Bloomberg). **First Quantum** Q3: Cu 108,959t, revenue $2.1bn, EBITDA $844M, leverage 2.6x; Cobre Panamá: government commission (30 Sep) recommended temporary restart to fund orderly closure, no Mulino decision (TipRanks, BNN).

Position mechanics needing a decision: (a) **US T-bill 912797SA6 matured 1 Oct 2026 — remove/roll**; (b) **verify Brazil closes** (BBAS3, B3SA3, XP, MOVI3) before reacting to earlier-brief numbers, and the book into 4 Nov Copom; (c) **Reliance board today** (Q2 + NCD); (d) **Indonesia/MSCI** review 11 Nov; (e) **RNW** is now a binding scheme (see below).
